Materials:

Structure, Aluminium: The structural profiles used are 6005 cold extruded alloy, 2.5 mm thick. They are extremely strong and offer excellent resistance to corrosion. After extrusion, the poles are varnished with a non-toxic lead-free powder paint. All the aluminum profiles have special constructions in the grooves in which the connecting bolts are inserted for extra durability and greater anti-vandal resistance.

Panels, HDPE: High-density polyethylene characterized by its resistance to chemical abrasives and unaffected by corrosion as it is a polymer. Due to its light, elastic nature, it offers high resistance to impact, making it very difficult to break.

Metallic parts: Stainless steel AISI-304, hot-dip galvanized steel and aluminium.

Fixings: Electro galvanized and stainless steel quality 8.8 DIN267, AISI-304.

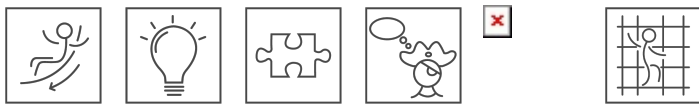

- For a very severe use of the equipment should increase inspection / maintenance.
- Don't use the product before the installation/maintenance is ready.
- Please check the maintenance instructions.

The biggest part (mm): 3340x40x40 / Maximum weight of parts (kg): 44

IMPACT ZONE: Required security area. Ground coverings according to the norm EN1176-1:2017 are recommended.
Spare parts/replacements availability: 10 years.

Ground anchoring screws not included.
