maintenance

ALP design Bench , overall dimensions (length x height x depth) 2400x830x560 mm, made of autoclave-treated pine (against woodworm, termites, and insects). Legs painted in Marson color. Stainless steel screws. Prepared for anchoring with Ø10 screws depending on the surface and project. Available at reBnew.

Pressure-treated pine wood, risk factor IV, ensuring its durability outdoors for a minimum period of 10 years. Under weather conditions, treated wood develops a warm honey-brown color that eventually turns into a natural silver-gray. If exposed to variable weather conditions, this type of pine wood may develop some surface cracks that do not diminish its durability in any way. Regarding resin and knots, it's important to note that these are part of its natural appearance.

Steel with FERRUS treatment: an iron protection process that ensures optimal corrosion resistance. The Ferrus treatment consists of three layers applied after cleaning all dirt and impurities using shot blasting, and it involves an electrolytic bath followed by an epoxy primer and a final coating of polyester powder paint.
