Footbath Atlas

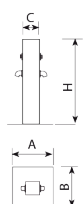

Stainless
steel

One of the increasingly common features found on Beaches is the footbath, allowing you to rinse the sand off your feet and legs. **This product is highly resistant to corrosion, ensuring durability outdoors.** The body and faucet are made of polished AISI 316 stainless steel, a durable material that withstands harsh weather conditions, including humidity, Solar radiation, and the high temperatures typical of summer on the coast. It includes an access panel for easy adjustment, maintenance, and repair of the faucet without disassembling the unit. Its functional and robust design guarantees durability and ease of use. Installation: Mains connection, 3/4" gas inlet.

Stainless steel: Structural alloy with a high chromium and nickel content, resistant to corrosion. High resistance to weather, humidity, UV rays and chemical agents present in urban environments. Thanks to the natural formation of a protective passive layer, stainless steel does not require additional coatings, ensuring excellent durability, low maintenance and a clean, timeless appearance – even under demanding conditions such as coastal or industrial areas.
