Treated pine
wood

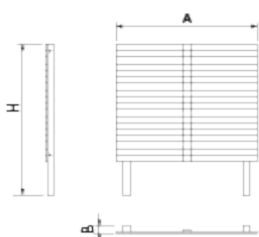

Low
maintenance

HIDE container cover screen, overall dimensions (length x width x height) 1800x110x2300 mm, made of pine wood (treated in a vacuum-pressure autoclave class 4 against woodworm, termites and insects). Anchored by embedding the posts 400 mm in the ground on a concrete base (not included).

Pressure-treated pine wood, risk factor IV, ensuring its durability outdoors for a minimum period of 10 years. Under weather conditions, treated wood develops a warm honey-brown color that eventually turns into a natural silver-gray. If exposed to variable weather conditions, this type of pine wood may develop some surface cracks that do not diminish its durability in any way. Regarding resin and knots, it's important to note that these are part of its natural appearance.
