

Optimally effective signaling system, used to separate lanes of traffic in different directions on sections separated by dividing lines, especially on sections where encroachment into the opposite lane poses a serious risk of accident.

- Increases the driver's level of attention.
- It acts as a circulation guide element.
- Clearly delimit the circulation space.
- It does not prevent or alter the maneuver in emergency situations.
- Light reflection in both directions of traffic.
- Anticipates visibility into the risk situation.
